**From Gutenberg to the Internet: A Sourcebook on the History of Information Technology** Jeremy M. Norman

From Gutenberg to the Internet presents 63 original readings from the history of computing, networking, and telecommunications arranged thematically by chapters. All of these readings were reset in one consistent typographic style for this edition. Most of the readings record basic discoveries from the 1830s through the 1960s that laid the foundation of the world of digital information in which we live. These readings, some of which are illustrated, trace historic steps from the early nineteenth century development of telegraph systems-the first data networks-through the development of the earliest general-purpose programmable computers and the earliest software, to the foundation in 1969 of ARPANET, the first national computer network that eventually became the Internet. The readings will allow you to review early developments and ideas in the history of information technology that eventually led to the convergence of computing, data networking, and telecommunications in the Internet.

The work begins with an illustrated historical introduction concerning the impact of the Internet on book culture. The introduction compares and contrasts the transition from manuscript to print initiated by Gutenberg's invention of printing by moveable type in the 15th century with the transition that began in the mid-19th century from a print-centric world to the present world in which printing co-exists with various electronic media that converged to form the Internet. I also provide a comprehensive and wide-ranging annotated timeline covering selected developments in the history of information technology from the year 100 up to 2004, and supply introductory notes to each reading. Some introductory notes contain supplementary illustrations.
