Applications of Information Theory to Epidemiology Gareth Hughes

In *Applications of Information Theory to Epidemiology*, author Gareth Hughes gathers together epidemiological applications of information theory and presents them in a manner that makes them accessible to plant disease epidemiologists and others in the field of plant pathology and beyond. He provides a summary of basic concepts, methods, and results that is not only understandable to newcomers to the topic, but is immediately useful and applicable for those using data for making diagnostic determinations.

This is the first book written on information theory applications explicitly for plant disease epidemiology. Few, if any, plant disease epidemiologists have followed closely the epidemiological applications of information theory. One reason for this is that applications of information theory to epidemiology have been devised almost exclusively by clinical epidemiologists. The author's key methodologies related to diagnostic decision making as it relates to plant diseases are drawn from his career work which includes the epidemiology and modeling of diseases. Dr. Hughes has been honored for his work using real-world disease problems in fruit crops as model systems for the development of methodology for basic research in epidemiology and plant disease losses. The breakthrough results of these basic studies have provided new innovative approaches for the management of diseases and have made a substantial impact on our knowledge in this area of science.

Applications of Information Theory to Epidemiology uses original clinical epidemiology examples as well as phytopathological applications to illustrate theory, citing a wide range of literature. This permits the examples in the book to be used by many diverse groups of scientists. This book is ideally suited for plant pathologists and others with an interest in the quantitative basis for diagnostic decision making. Epidemiologists (botanical, also clinical and veterinary) will find it useful as well. Those who have enjoyed Larry Madden's *The Study of Plant Disease Epidemics* will welcome this title as a continuation of the applied knowledge in this area. The author includes a helpful glossary of terms for those new to the nomenclature.

From reader reviews:

Jocelyn Welch:

What do you regarding book? It is not important along? Or just adding material when you really need something to explain what the ones you have problem? How about your time? Or are you busy person? If you don't have spare time to complete others business, it is make one feel bored faster. And you have extra time? What did you do? Every person has many questions above. They should answer that question mainly because just their can do that. It said that about guide. Book is familiar on every person. Yes, it is appropriate. Because start from on pre-school until university need this kind of Applications of Information Theory to Epidemiology to read.

Gregory McCormick:

People live in this new time of lifestyle always attempt to and must have the spare time or they will get large amount of stress from both everyday life and work. So , when we ask do people have free time, we will say absolutely yes. People is human not really a huge robot. Then we ask again, what kind of activity are there when the spare time coming to you actually of course your answer will probably unlimited right. Then do you try this one, reading guides. It can be your alternative with spending your spare time, the book you have read will be Applications of Information Theory to Epidemiology.

Nellie Nelson:

As a college student exactly feel bored to help reading. If their teacher questioned them to go to the library in order to make summary for some publication, they are complained. Just tiny students that has reading's soul or real their interest. They just do what the educator want, like asked to go to the library. They go to generally there but nothing reading seriously. Any students feel that examining is not important, boring and also can't see colorful pics on there. Yeah, it is to get complicated. Book is very important to suit your needs. As we know that on this period of time, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. Therefore , this Applications of Information Theory to Epidemiology can make you really feel more interested to read.

Jordan Miller:

A lot of people said that they feel uninterested when they reading a e-book. They are directly felt that when they get a half areas of the book. You can choose the actual book Applications of Information Theory to Epidemiology to make your own personal reading is interesting. Your skill of reading skill is developing when you like reading. Try to choose basic book to make you enjoy to learn it and mingle the idea about book and reading through especially. It is to be first opinion for you to like to open up a book and learn it. Beside that the e-book Applications of Information Theory to Epidemiology can to be your brand-new friend when you're really feel alone and confuse in doing what must you're doing of that time.
