Statistics for Linguistics with R: A Practical Introduction (Mouton Textbook)

Stefan Th. Gries

Statistics for Linguistics with R: A Practical Introduction (**Mouton Textbook**) Stefan Th. Gries
This book is the revised and extended second edition of Statistics for Linguistics with R. The comprehensive revision includes new small sections on programming topics that facilitate statistical analysis, the addition of a variety of statistical functions readers can apply to their own data, and a revision of overview sections on statistical tests and regression modeling. The main revision is a complete rewrite of the chapter on multifactorial approaches, which now contains sections on linear regression, binary and ordinal logistic regression, multinomial and Poisson regression, and repeated-measures ANOVA. The revisions are completed by a new visual tool to identify the right statistical test for a given problem and data set.
